

DECLAN GONSALVES . Disease - Psoriasis

PH - [REDACTED]

Declan was 10 yrs old when we first noticed black patches/cuts on soles of his feet. He is actively involved in sports (football) and we at first thought it was a skin ailment due to moisture between his foot and the shoes. Normal creams had no effect.

It was at this stage we decided to try Homeopathy.

Being a child he found it difficult at first to regularly take his medicines on time along with the diet prescribed for him by Dr. Mehra. It was only when he himself found that the medicines were doing him some good that he began taking his medication seriously.

He was undertreatment for approx 8 months & has discontinued medication for the moment.

Dr. Mehra has asked us to monitor his feet monthly and give him regular feedback.

Last 6 months he is asymptomatic.
