Lower Respiratory Infection

Suvina Kamath (14 yrs)

My daughter Suvina had recurrent lower respiratory infection. In a way, it was acute allergic cough which used to be worst at night. She used to have sleepless nights and I used to give her cough syrup at night. It used to eventually lead to infection and I had to administer antibiotics. I never supported this course of treatment as it impairs the entire immune system. My friend suggested that I go to Dr. Sunil Mehra as he had treated her asthma successfully.

I was very surprised with his treatment in the first week itself. The cough subsided by 60%. On the next week, it subsided by another 20%. My daughter had very bad eating habits also (fast foods). Dr. Mehra really convinced her to eat healthy foods like fruits, vegetables and proper meals (a thing which was very difficult for me to do). She seriously ~~took~~ followed his advice (not only her but also my ~~&~~ other daughter).

~~I am~~ Now, I am happy that my daughter has recovered and has not got her allergy this time when the weather changed. I am feeling very sorry that during the course of the treatment, I was not very punctual. But surprisingly, he is a very concerned & caring doctor, because of which I finished the treatment. One can barely meet a doctor so caring and sincere as he is about his profession.

I am very proud to write this so that
people for other people to read and
have faith in homeopathy. I am also proud to have
so such a doctor at such a close vicinity of our
residence my daughter is now fine
