

Chronic Bronchitis

Avishi Khas

Mobile [REDACTED]

Duration of Illness: 2 years and above

Duration of Treatment: 4 months

Percentage of Recovery: 80%

Role of Patient — It's the patient's mother who took initiative to get this cured.

Avishi is going to be now 4 years on 10 August 2010.

Since she was 1 year and 8 months, used to get cough and this used to turn chronic.

Every medicine worked but somehow it was always some high drugs which use to cure the same.

Some how we as parents were never happy in introducing high drugs at a very small age.

Our family has good doctors but they being in profession always suggested us to consult a doctor as we were on move for job.

~~One of my friends~~ One of my friends suggested me Dr. Mehra, we thought still it's never too hard to consult if it works.

Actually it has worked for Avishi.

One of my true honest comment, that Dr. Mehra suggested us to have initially both the treatments as Homoeopathy is a slow process and has to take over the allopathy medicines.
See below Next page

Today we are having consultation on regular basis to avoid the problems.

Child is the treasure for parents and Dr. have the key for maintaining the treasure healthy.

One message each and every time we got from this routine check-up was to follow the advice of the doctor.

One more interesting thing which our doctor told, it was that "Mother has to cure the child and not the medicine", how to cure is the key with mother. Continuous follow up from the Doctor's side is the tremendous feeling we had, let it be "smile" or a follow-up call. It is something we can never forget. This shows the concern from his side, he shares towards the patients.

We are happy and would like to move towards the trouble free from disease.

We wish success to his dedicated work towards the medical science.

Regards

Amresh Khair

Father of Patient
