

Recurrent Ischioorectal Abscess.

Pawan Tilokani

My name is Pawan Tilokani, Age 24 years, tel No. [REDACTED]
email: pawan_mumbai2004@yahoo.co.uk.

January 2009, I had developed what is called ATWDS (Furuncle) at a place between the penis and the anus. After 2 days I started Allopathy medicines. As a result within 15 days, the ATWDS which had swollen as much as the size of a golf ball got reduced to almost nothing. But within the next 15 days the pain & the swollen feeling started once again. My allopathic doctor in consultation with the surgeon decided that I had to undergo a small operation, wherein, the swollen part will be cut & "pus" will be taken out from the "Abscess". After 10 days, the wound because of the cut got filled up and I was happy. But in the next 5 days I saw a new small fist developing near the anus. The fist used to get burst very fast & used to come again after a day or so.

THAT WAS ^{the} TIME WHEN I CAME TO DR. SUNIL MEHRA'S CLINIC. He started the treatment, changed my diet, and slowly and in fact very slowly I got rid of my recurring fist. It took around 5 months. But still it was worth it because the allopathic doctor wanted to do another operation for the fist. When he did the first operation he had told me that operation was the permanent solution but it wasn't permanent. So thanks MR. KANNAIYA who had brought me to this clinic. Staff is good.
