

Slip-disc & giddiness
Dr. Jivekar

I visited Dr. Mehra very accidentally. Let me thank the person in the first place because of whom I visited Dr. Mehra. That person is miss Sarda Rao! Many many thanks to her. When I visited first time, there was no specific / serious ~~disease~~ disease. Normal complaints. But in the very first visit I realised that Dr. Mehra is very very different than any other doctors I have visited so far. His way of diagnosis is so perfect that when it really happens that time person is agast. There is a saying in China, "If you give a person fish to eat, he will eat one day, but if you teach him how to fish, he will eat his entire life." Dr. Mehra's way of treatment is exactly same. When I got back-pain first time, he has diagnosed it as "starting of spondylitis" & warned me to take bed rest for "ONLY 8 DAYS" & his medicine. He has also warned that if I don't take rest then it is going to increase. Exactly same thing happened after six months & I had to take bed rest for more than ONE MONTH. Today I am totally out of my pain. He visited twice at my place in Thane. But the instructions which he gave me were so perfect that things went the way he was telling me & improvement were shown in my health. Even if his telephonic instructions were so much in details that patient feels very comfortable. While I was taking bed rest, I started feeling giddy, & not in a position to go to his clinic. By now he knew my anatomy so well that medicine was suggested over the phone & there was

immediate improvement. Over the period of time patient gets so much of confidence in him that I think after some day only if I talk to him I will get cured. His knowledge is so incredible & logically correct that any intelligent or non-intelligent person will understand. He not only cures the patient physically but he has the ability to change patient's entire life-style which will help a person for his entire life.

Note:- After six months, before starting Dr. Mehra's treatment, it was diagnosed as slip Disk thru MRI-scan.
